9 Wonderpeople/Acestorm
2022.02 – 2024.04

Part Lead, Business Team

Night Walker, Super People

10 Dalcomsoft
2024.10 – 2026.07

Team Lead, Live Game Design, Live Director

Led app services for 11 SuperStar titles (K-pop IP)

Game titles are trademarks of their respective owners.

Core work of a live service

Global launches and live ops for PC and mobile games, A to Z, as PM, designer and director. I turn user needs and metrics into product direction and dev priorities, and as a director I ran and coordinated dev, design, business and operations work. Lately I prototype events with AI and automate routine work.

Product decisions & milestones

Deciding what to build from research and metrics, then driving it to delivery through design and dev milestones. At Neowiz, as design lead, I designed 18 core systems (10 new, 8 reworked) and ran the alpha and beta milestones.

Case: from user research to shipped events
Case: soft launch metrics → pre-launch fixes

Launch & live ops

Soft launch, launch, live ops and sunset: I ran every stage, A to Z. Soft launches for Lyn, Chaos Chronicle and Shadow Seven, publishing integration for Night Walker, the Steam China launch of Super People, and the remaining issues from 5 sunset services.

Case: redefining the systems to publisher spec
Work: Chaos Chronicle service sunset

Team & hiring

Recruiting, team structure and who owns what. At Dalcomsoft I restructured 24 people across three teams into one combined design, QA, CS team (13, led by me), keeping all 7 titles running, while holding the QA lead role; at Skypeople I set up the business and operations teams from scratch.

Case: restructuring (see p.5)
Work: Skypeople org setup

Operational standards

Turning repetitive work into rules and automation. I automated SKUs for 7 projects with Google Apps Script and documented the abuse follow-up SOP and the consolidated Notion work history.

Work: SKU automation and the abuse SOP

19 years
Total experience

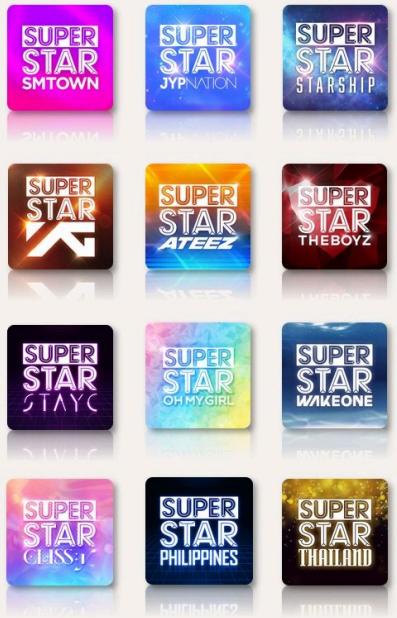

10
Companies

₩18.3B
Peak revenue experience (Lyn: The Lightbringer, first 6 months after launch)

30
Projects: 8 published, 22 operated

Dalcomsoft
Superstar Series

Multi-title live operations and user-led product work

From survey request to shipped events

11 titles

Led app services for 11 SuperStar titles, Oct 2024 – Jul 2026

In one line	Turned the survey request for webview events into shipped in-game minigames and webview events
Period & role	Employed 2024.10 – 2026.07, Team Lead, Live Game Design (live director), case period: survey 2025.11 → launch 2026.05
Problem	In the November 2025 satisfaction survey across 6 titles (Korean, English, Japanese), IP satisfaction was high and players asked for the old webview events back. I took that on as an event improvement task.
Decision	With limited dev resources, I put in-game minigames first because they could run on existing systems, and extended to webview events, which needed separate development, afterwards.
Decision scope	I set the response order and the event scope (MVP); the dev schedule and launch dates were settled with the dev team and management.

Game names and images are trademarks and copyrighted works of Dalcomsoft.

From survey request to shipped events

Product decisions & milestones

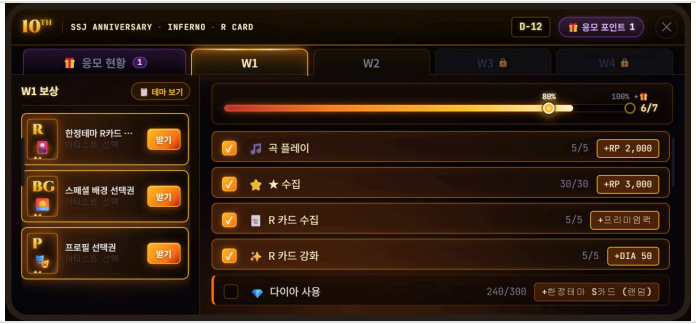

What I did	Minigames v1 and v2 rolled out title by title (v1 2025-12, v2 2026-01). For the decoration event timed to a new group launch I wrote the brief myself and built a working AI prototype for the pre-development review, then set the scope down to core features to fit the dev schedule. After that I built the SuperStar JYP Nation 10th anniversary webview event prototype.
Deferred	Collection completion, viewing/display, personalization and community improvements from the same survey went to the H1 2026 direction proposal. For the decoration event, deck expansion, gacha and grooming details were deferred and only the core shipped.
Result & status	Shipped: minigames v1 and v2, the decoration event (2026-04-30 to 05-23, SuperStar STAYC new group launch) and the 10th anniversary webview event.
Evidence	Notion "Satisfaction survey summary", Notion "decoration_event", 2 demos (decoration prototype, SSJ 10th anniversary webview)

Also from the same period: 2 supporting cases

Project shipped | Launch & live ops

Soft launch metrics into pre-launch fixes

₩18.3B
Revenue, cumulative through 2019

Lyn

In one line	Turned soft launch metrics from 3 markets into product, currency and early-flow fixes before the global launch
Period & role	Team Lead, Mobile Business Division, Nexon Korea (employed 2015.07 – 2019.10), Lyn 2017.01 – 2019.10 (developer collaboration, build coordination)
Problem	Bringing the developer build up to launch condition meant turning user tests and market metrics into development requests. The soft launch (Australia, Malaysia, the Philippines, 2019.01–02) showed an unbalanced product mix, slow paid-gem spending and early drop-off.
Decision	I framed product mix, currency loop and early flow as fixes to close before launch, and set the product direction by benchmarking a comparable title (Langrisser).

Game names and images are trademarks and copyrighted works of Nexon.

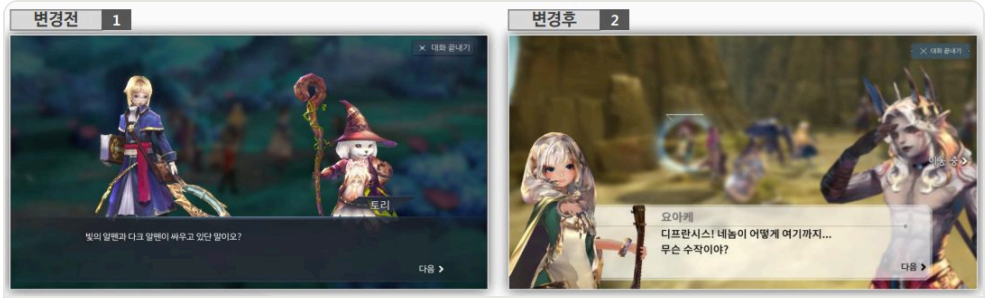

Soft launch metrics into pre-launch fixes

Launch & live ops

What I did	As Team Lead of the Mobile Business Division I ran the FGT (2018.06–07, testers selected against 10 competing titles) and the internal test (2018.11, 3 days) and turned the results into development requests. After the soft launch I wrote up the product, currency and early-flow fixes and aligned them with the developer.
Result & status	Project shipped (2019 global grand launch). Three fixes landed in the grand launch build: the reworked product lineup, the trading post timing and its dedicated store, and the early flow. Project results were a peak of #3 grossing on the App Store and Google Play in Korea and ₩18.3B cumulative revenue in 2019; my contribution was test lead, build improvement coordination, and the product and currency proposals.
Evidence	Notion "In-game improvement proposal", soft launch metrics report (business team, not public), FGT satisfaction data and internal test report (business team, not public)

System UI plan: the fix laid out as a screen flow

Before (1), after (2): early guidance dialogue box and portrait layout reworked (one of three polishing fixes: early flow)

Project shipped | Launch & live ops

China service flows to the Korean spec

330K+
Cumulative new users in Korea

In one line	Redefined the payment and server-select flows of the China service to the Korean publisher spec
Period & role	2022.02 – 2024.04, Part Lead, Business Team, Wonderpeople/Acestorm, Night Walker Korea (publisher: Nexon), business and publishing integration
Problem	The paid-currency purchase system and the SDK-based server-select flow from the China service had to be reworked for Korea, and the systems had to be defined against the publisher payment, coupon and server policies.
Decision	Taking the publisher policy and the internal API docs as the baseline, I redefined the UI/UX and the user flow of all three systems (paid-currency purchase, coupons and server select) to the Korean spec.

Night Walker

CASE 3, EXECUTION

China service flows to the Korean spec

Launch & live ops

What I did	I wrote the paid-currency purchase integration design, the coupon feature definition and the server-select UI/flow design, and aligned them with the publisher and the dev team. After launch I analyzed weekly sales to propose products and used live metrics to propose fixes for player hurdles.
Result & status	Project shipped (Korea launch 2023-01-26). Paid currency and coupons are recorded as live; server select is documented as foundation work complete. The project reached 330K+ new users in Korea; my contribution was the integration work and the product and hurdle proposals.
Evidence	Notion "Paid-currency purchase system integration", "Coupon system integration", "Server-select UI/flow design", "Added promotional product feature"

560K+

Cumulative new users in China, 2022-10-11 – 2023-01-08 (first 90 days after Early Access)

- Ran live ops for the China service on Steam: Douyu and KOOK channels, streaming events and VOC collection, through metrics analysis and management reporting.

Service	Launched and ran live service for the China service on Steam (PC battle royale shooter)
Channels	Ran communities on Douyu, KOOK, QQ, WeiBo, Bilibili and WeChat, posted video content to the service channels, and managed the channels to drive virality and keep VOC coming in
Streaming events	Streams where event applicants played alongside the operator character Super Girl (超击小妹) to draw participants and viewers, with real-time talk on KOOK
User content	Collected user highlight clips and posted them as a series on the Douyu channel (seasons 3 and 4 confirmed), with prizes for selected users
Shop & events	Revamped the in-game shop, planned and ran events, planned monetization products
Metrics & reporting	Analyzed 90-day post-Early Access metrics (DAU, new users, retention, playtime, streaming vs competitors) and reported to the head of management planning, leading to issues being handed to the balance patch team
Operations	Managed CS/monitoring vendors, handled cheat response

7 markets

Soft-launch countries (Indonesia, Hong Kong, Philippines, Malaysia, Singapore, Thailand, Macau)

Period 2019.10 – 2020.04

- As development PM I designed the core systems (content loop, monetization, tracking) and took the game from a 7-market soft launch to the Korea, US and Taiwan grand launch.

Role	Development PM (2019.10 – 2020.04)
System design	Content loop (currency flow), level-based content unlocks and reward structure, monetization and package structure (boxes, costumes, instant open), Tapjoy funnel, ad placement and a tracking-event standard across every stage, referral pages in 5 languages, rating management system
Metrics → action → result	Weak Japan performance → added rating management → Google Play rating 3.29 in Japan → 4.4 global
Soft launch	Indonesia, Hong Kong, the Philippines, Malaysia, Singapore, Thailand, Macau (7 markets)
Grand launch	2020-02-20 Korea, US, Taiwan. #173 grossing on Android in Korea

Evidence

In-game currency/BM improvements ↗ Soft launch comparison ↗
Added rating management system ↗

Shadow Seven

Mission event UI: the mission event I proposed for Japan retention

1Q–2Q update plan: the content order I set after soft launch, including the rating-management system

PROJECT TIMELINE: BY COMPANY

19 years, 10 companies

Company	Team, role, period	Headline number
Dalcomsoft Led app services for 11 SuperStar titles (K-pop IP)	Team Lead, Live Game Design, Live Director, 2024.10 – 2026.07 Service direction (2025 plan, 2026 H1) → dev milestones, data-driven Live-ops → system & workflow revamps	**11 titles**
Wonderpeople/ Acestorm Night Walker, Super People	Part Lead, Business Team, 2022.02 – 2024.04 Night Walker 330K+ new users, DAU 64K, D+1 52–56% / Super People (Steam, China): launch, live ops, metrics analysis and reporting to management planning, 560K+ new users (China), peak China DAU 71K / Recruiting: Wanted collab, PR video	**330K+**
Neowiz Master of Knights	Team Lead, Game Design, Snowball Studio, 2021.02 – 2021.10 Design team lead, designed 10 new and 8 reworked core systems for alpha and beta, ran the dev milestones, hired the design team	
Skypeople Five Stars	Team Lead, Business Team, 2020.07 – 2021.02 Set up and recruited the business and operations teams, then ran launch prep and live ops: 200K pre-registrations, 280K+ new users, ₩2.4B revenue	**₩2.4B**
Neptune Legend Shadow Seven	Development PM, Studio, 2019.10 – 2020.04 Designed the content loop, monetization and tracking systems, soft launch in 7 markets → grand launch, Google Play rating Japan 3.29 → global 4.4	**7 markets**
Nexon Korea Lyn: The Lightbringer, Running Man Heroes, Dragon Nest 2, Chaos Chronicle, Legion of Heroes Global	Team Lead, Mobile Business Division, 2015.07 – 2019.10 Lyn ₩18.3B, #3 on both stores / Chaos Chronicle ₩9.8B, #7, featured / Legion of Heroes main PM, 5× prior revenue	**₩18.3B**
Netmarble Blue KON	Business PM, KON Studio, 2015.03 – 2015.07 Designed the KON tutorial flow and analyzed competing titles as launch foundation work	
Softnyx NTD, Rakion 2, Grand Age	Business PM, Strategic Business Team, 2011.07 – 2015.02 Designed 2 internal tests, 4 FGIs, 2 FGTs for NTD, analyzed monetization across 5 titles, prepared the Latin America launch	
NHN Service Tera web ops, Atlantica, R2	Part Lead, Hangame Operations Division, 2008.05 – 2011.07 Ran the Tera web ops part and FUN QA gameplay analysis on 4 titles; game operations for Atlantica and R2	
Webzen SUN Online	SUN Operations Team, 2006.04 – 2007.10 Game operations for the SUN Online launch: VOC analysis and log audits	

* 2007.10 – 2008.05 returned to university (Kangnam University, Computer Engineering, class of 2009)

Game titles are trademarks of their respective owners.

I use AI to turn ideas into working screens, not to write documents.

DALCOMSOFT, WORK PROTOTYPES

Decoration event design & wireframe

Turned collection and display requests from the satisfaction survey into a decoration event design and wireframe. Open the link below for the demo (Korean).

How to try it	Pick items on the decoration screen and place them.
Why it was built	Built to settle the screen flow before development started.
My part	I wrote the brief myself and built the prototype.
Shipped?	The event shipped 2026-04-30 to 05-23.
Demo	Open ↗

DALCOMSOFT, WORK PROTOTYPES

SuperStar JYP Nation 10th anniversary webview event prototype

Validated on a working webview instead of a spec. I built the clickable prototype myself with AI, covering weekly missions, reward claims and the entry flow. Open the link below to play it (Korean).

How to try it	Switch the week and compare the reward lock states, then follow missions → claim rewards → entry flow.
Why it was built	Built to validate the flow on a working webview instead of a spec.
My part	I built the interactive prototype myself with AI.
Shipped?	Shipped: May 2026.
Demo	Open ↗

Personal product Our Household Budget: A budget web app the two of us use every day. Built on Google Apps Script + a single HTML file, running live. Open ↗

Screens are a public summary with internal information removed, trademarks and copyright belong to Dalcomsoft.
