ROUTINE WORK CUT WITH AI

What the numbers say

Dalcomsoft — ran live service for K-pop idol-IP collectible rhythm games (SuperStar, 12 titles), leading planning (10) · cards, events & products · 30+ AI skills cut routine 60%

Lyn: The Lightbringer — ₩18.3B lifetime, #3 grossing on both KR stores (NEXON, business PM)

Chaos Chronicle — ₩9.8B lifetime, featured by Apple & Google in NA

NEOWIZ — authored 30 system specs hands-on (10 new · 10 reworked · 10 balancing)

What I do now

A personal AI OS — 29 rules · 70 skills · 23 agents; output gated by a 6-axis rubric + blind grading (avg 90.1)

A 3-AI collaboration bus — GPT orders, Claude executes, Codex verifies; maker ≠ verifier by model family

This very site is the proof — designed, built and shipped from natural-language instructions alone

How I work, in one line

Records until they become systems — delegation is designed, and my own output gets verified by someone else.
